

Unilucent PA-13

For a brighter skin and more uniform complexion

Unilucent PA-13 is an active complex to inhibit the formation of melanin as well as its deposition in keratinocytes. It is based on D-Panthenyl Triacetate and acetylated stilbenes from *Rheum rhaponticum*.

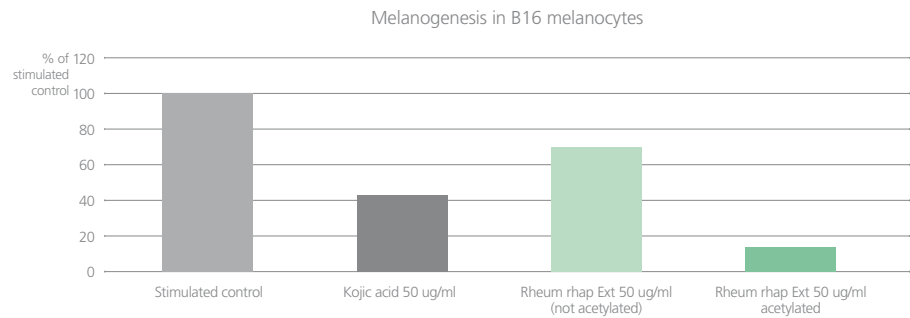

Unilucent PA-13 has proven to have beneficial effects on skin complexion and radiance:

- Brighter and more uniform skin tone by inhibition of melanogenesis and melanin distribution in the epidermis.
- Enhanced skin radiance.
- Younger looking skin complexion.

Unilucent PA-13

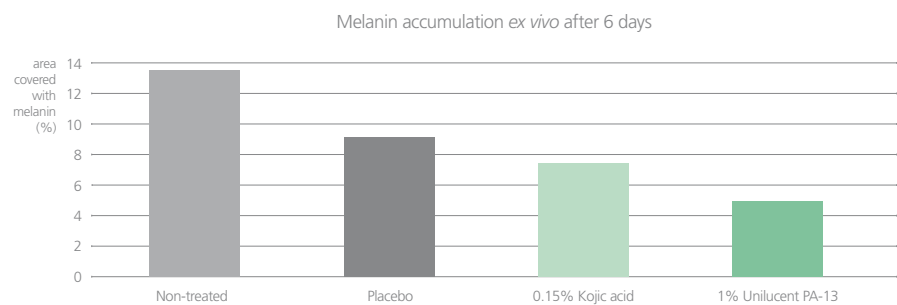

in vitro results

Inhibition of melanogenesis in B16 melanocytes stimulated by NDP-MSH.

ex vivo results

Inhibition of melanin accumulation in lower epidermis of human skin explants after UV stimulation.

Cosmetic application

Dosage: 0.5 – 1%

Skin brightening

Radiance enhancing

Anti-aging
